

Lab 11 – Choose Your Own Adventure

Description

Over the last several weeks, labs and quizzes have been provided to help assess your abilities related to the content presented in this course. Your target for this last week is to prepare your own lab for a topic we've already covered or another software security subject of interest.

Tasks

1. Develop a lab for a software security topic of your choosing
2. Lab must include:
 - a. scoring criteria
 - b. description of which software security issue is being demonstrated and fixed
 - c. at least code review, explanation, and description of mitigation or other remediation
 - d. an answer key
3. Test the lab

Deliverables

- A Word or PDF document containing your lab instructions as well as the answer key
- Any other required artifacts (scripts, code, Dockerfiles, etc)

Scoring

This lab is not scored and is offered as a means to provide feedback on how you'd like to change current material that is covered or add more material to be covered.
